Technical Information

The goal was to create a distinctive style of wine by harnessing the qualities of three different but complementary grape varieties from several notable winegrowing regions in Spain. Fermentations take place in stainless steel tanks over 20-25 days at maximum temperatures of 15°C. Once the vinification process is complete, the wine is left on its lees at low temperature for 2-3 months to develop secondary flavour characteristics. In the case of Chardonnay, the wine remains in French oak barrels for 3 months, with batonnage (stirring the lees) occurring several times a week.
